

# **WHAT EVIDENCE DO WE HAVE TO SUPPORT THE CASE OF TELEMEDICINE IN WOUND CARE SO FAR? FOCUSING ON DIABETIC WOUNDS**

**Schnack Rasmussen Benjamin<sup>1</sup>**

*<sup>1</sup> Department of Endocrinology and Metabolism, Odense University Hospital (Odense, Denmark).*

The purpose of this presentation is to provide a brief critical overview of the evidence available to support telemedicine wound monitoring/treatment. This is in relation to patient care and not only decision makers' need.

Furthermore this presentation gives a subjective proposal on what we need to know before we dare rely on telemedicine for treatment focusing on the clinical aspect of diabetic foot ulcers.
