

KWMS Guest session: Wound Management in Korea

64 PERSPECTIVES OF UBIQUITOUS WOUND CARE MANAGEMENT BASED ON MOBILE APPLICATION AND ROLE OF REGIONAL WOUND CARE CENTER AS AN EDUCATIONAL PERFORMER

Heo Chan Yeong¹

¹Department of Plastic Surgery and Reconstructive Surgery, Seoul National University Bundang Hospital (Seongnam, Republic of Korea).

4 years ago, we had developed the smartphone application 'Wound Manager' and have been reported the usefulness for pressure ulcer management for several years. By our experiences, development of mobile healthcare system will be the medical trend for crucial long journey to the hospital of the disabled versus face to face doctoral care. By achieving this well-established pilot project, we now have launched the national wound care center and have been preparing the future needs. Actually this project had been attributed by the demand of community promoting the public health. At the beginning, the regular educational forum has been taken place named Korean Pressure Ulcer Advisory Panel (KPUAP). Over the years, new challenges and mandate have arisen in parallel development of mobile devices. The new epoch has been originated and I will talk about the all progress. Free Paper Session: Negative Pressure Wound Therapy
